Lifetime of Changing Abilities

©DesignABLE Environments Inc.

Who are we designing for?

Classification: Public

Equitable Safety Initiative

By anticipating difference, therefore considering the widest range of human abilities and experiences in our designs, we're able to identify potential barriers and impacts to safety beyond the presumption of 'average'.

	Permanent	Temporary	Situational
Touch	One arm	Arm injury	New parent
See	Blind	Cataract	Distracted driver
Hear	Deaf	Ear infection	Barrender
Speak	Non-verbal	Laryngitis	Heavy accent

Classification: Public

CDM 2015 requirements

Regulation 11.3 "the principal designer must identify and eliminate or control, so far as is reasonably practicable, foreseeable risks to the health and safety of any person-

- (a) carrying out or liable to be affected by construction work;
- (b) maintaining or cleaning a structure; or
- (c) using a structure designed as a workplace

Designing Right First Time

The diagram illustrates a five-stage process for inclusive design, each represented by a circular icon with a specific symbol (gears, crane, circular arrows, person with star, and a group of people). The stages are connected by equals signs, suggesting a continuous or cumulative process.

Appendix 1: The general principles of prevention

2(a) adapt the work to the individual, especially regarding the design of workplaces, the choice of work equipment and the choice of working and production methods...to reduce the effect on health;

Creation of wheel of considerations?

To ensure we account for the considerations that contribute to an equitable environment

Heathrow

Classification: Public

Wheel of Considerations

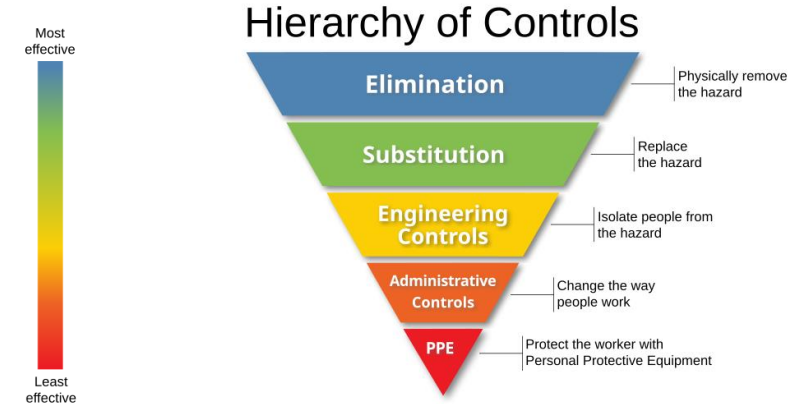

People	Consider the people who use your space, the people who do not use your space, and why
Environment	Consider the design features of the environment your space includes
Activities	Consider the activities that happen or should happen in your space
Risks	Review potential risks of low agency scores and discuss potential mitigations
Legacy	Review relevant projects within your organisation or outside of it and add to the Legacy list
Systems-thinking	Coordinate with wider project and programmes to align on 'Inclusion as Standard'

This measurement tool aims to increase awareness of how **inclusive environments enable people to equitably engage in life's activities** so design teams can design more inclusive, safe, and equitable projects and construction sites

13

Classification: Public

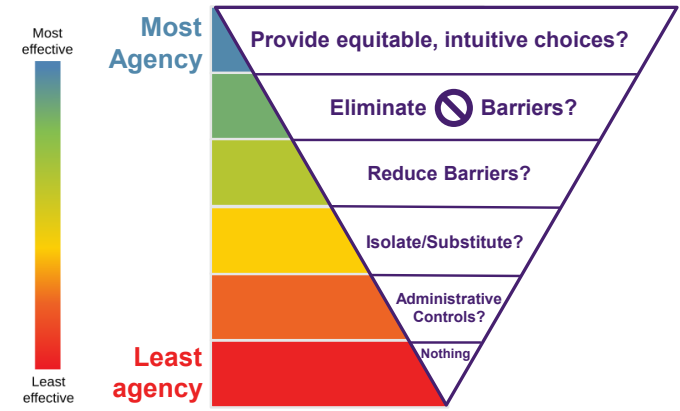

If a hierarchy of controls can help to ensure safety

14

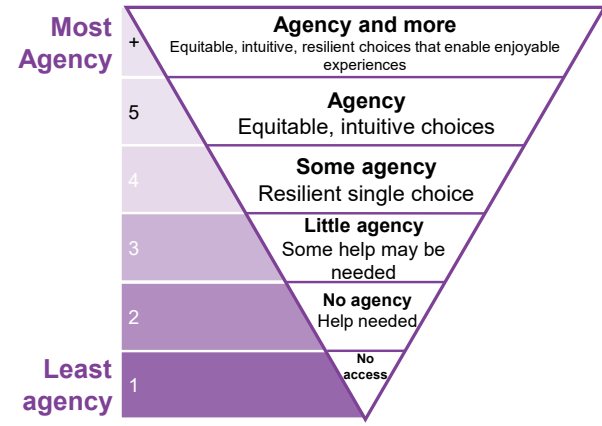

Classification: Public

Can a hierarchy of equity help ensure inclusion?

Classification: Internal

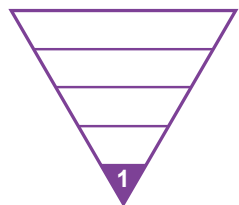

Can a hierarchy of equity be measured against an agency pyramid?

Classification: Internal

No access
Stepped only

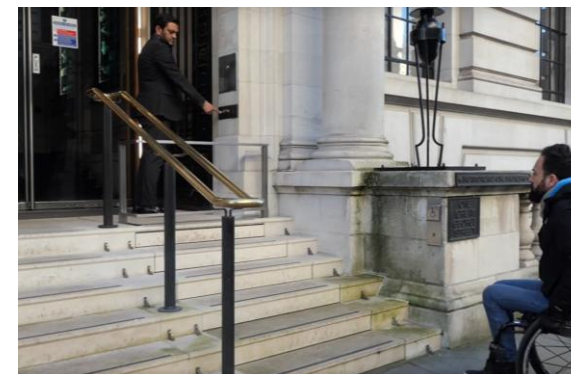

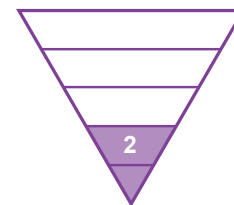

No access or agency

Classification: Internal

No agency
Access to door
requires staff support

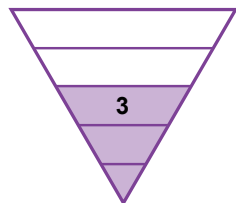

Help is required

Classification: Internal

Some agency
Door is open but
signage is low contrast

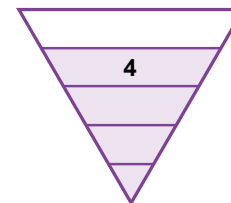

Some help may be needed

Classification: Internal

Agency
Single door is opened
with a button

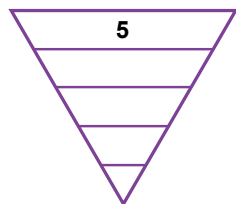

Resilient single choice

Classification: Internal

Most agency
Multiple doors open
equally for everyone

Equitable, intuitive choices

Classification: Public

Proposed wheel of considerations measurement moments

Classification: Public

Everyone is different, don't assume

'Norms' are determined by what is most commonly experienced by the majority of people, this gives us measures by which 'typical' behaviours and skills are established but **everyone** is different.

Be curious

Check for assumptions

Use accessibility checker

Make it flexible

Give safe space for feedback

Some assumptions:

- Everyone knows what they need
- Everyone asks for help if they need help
- Everyone know how to ask for help
- Everyone knows who to ask for help
- Everyone knows where to go for help
- Everyone understands the language being used
- Everyone understands what you have said
- Everyone can read the words on the page
